Το Ελληνικό Ίδρυμα Έρευνας και Καινοτομίας - ΕΛ.ΙΔ.Ε.Κ. είναι σημαντικός χρηματοδότης της ακαδημαϊκής έρευνας στην Ελλάδα. Οι ερευνητές υποβάλλουν ετησίως προτάσεις έργων σε διάφορα προγράμματα και αυτό, μέσω διαδικασίας αξιολόγησης, αποφασίζει ποια έργα θα χρηματοδοτηθούν. Αφού χρηματοδοτηθούν τα έργα (τα ποσά κυμαίνονται από 100.000€ έως 1.000.000€), ο οργανισμός που απασχολούνται οι ερευνητές διαχειρίζεται τα χρήματα για λογαριασμό των ερευνητών.

Ο Δ/ντης του ΕΛ.ΙΔ.Ε.Κ. σας κάλεσε να σχεδιάσετε και να υλοποιήσετε ένα σύστημα αποθήκευσης, διαχείρισης και ανάλυσης των πληροφοριών που συγκεντρώνονται από το ίδρυμα.

ΕΛ.ΙΔ.Ε.Κ.
Ελληνικό Ίδρυμα Έρευνας & Καινοτομίας

9. Οι οργανισμοί ανήκουν σε μια από τις 3 κατηγορίες:
 - α) Πανεπιστήμια
 - β) Ερευνητικά Κέντρα
 - γ) Εταιρίες
10. Η ημερομηνία έναρξης ενός έργου (start_date) πρέπει χρονικά να είναι πριν από την ημερομηνία λήξης του (end_date)
11. Η αξιολόγηση του έργου μπορεί να έχει τιμές από 0-100.
12. Σε ένα έργο δουλεύουν μόνο ερευνητές του οργανισμού στον οποίο ανήκει το έργο.
13. Ο ερευνητής που αξιολόγησε ένα έργο δεν μπορεί να δουλεύει στον οργανισμό στον οποίο ανήκει το έργο και συνεπώς ούτε να δουλεύει σε αυτό.
14. Κάθε έργο έχει έναν υπάλληλο του ΕΛΙΔΕΚ να το ελέγχει.
15. Ο supervisor κάθε έργου δουλεύει σε αυτό.
16. Όλα τα παραδοτέα πρέπει να υποβληθούν πριν την λήξη του έργου.

Όσα από τα παραπάνω δεν απαιτούν διασχιστικό έλεγχο υλοποιούνται με απλά checks ενώ τα πιο πολύπλοκα με triggers πριν/μετα την εισαγωγή, επικαιροποίηση ή διαγραφή δεδομένων.

Τέλος όσον αφορά τα χαρακτηριστικά των σχέσεων μερικά κρίνονται απαραίτητα για την εισαγωγή του στοιχείου στην βάση (όπως το όνομα ενός οργανισμού) ενώ άλλα δευτερεύοντα (όπως η διεύθυνση τους οργανισμού). Στα πρώτα απαιτούμε να μην γίνεται δεκτή η τιμή "NULL" ενώ στα δεύτερα όχι.

Η υλοποίηση της βάσης έγινε με sql. Ολόκληρος ο κώδικας βρίσκεται ανεβασμένος αλλά στην παρούσα αναφορά θα εξετάσουμε καίρια σημεία του για την επεξήγηση της λύσης μας.

Query για την δημιουργία της βάσης:

```
1 • DROP DATABASE IF EXISTS elidekdb;
2 CREATE DATABASE elidekdb;
3 USE elidekdb;
```

Queries για την δημιουργία των σχέσεων:

```
5 CREATE TABLE program (
6     program_id INT(10) UNSIGNED NOT NULL AUTO_INCREMENT,

108     CONSTRAINT pk_delivery PRIMARY KEY (project_id,deliverable_id)
109 );

```

Επιβεβαιώνεται πως κατά την δημιουργία του κάθε πίνακα ορίζονται αυστηρά οι τύποι κάθε χαρακτηριστικού καθώς οι περιορισμοί τους (not null, null, primary key, unsigned).

Ταυτόχρονα ορίζονται και οι απλοί έλεγχοι που πρέπει να κάνει η βάση και αναφέραμε νωρίτερα. Ένα παράδειγμα είναι το “CONSTRAINT time_continuity CHECK (start_date < end_date)” που ελέγχει τον περιορισμό 10.

Τέλος ορίζουμε τα κλειδιά που χρειαζόμαστε για να γίνονται σωστά οι παραπομπές μεταξύ σχέσεων. Προφανώς η σειρά δημιουργίας των σχέσεων είναι τέτοια ώστε να υπάρχουν ήδη οι πίνακες στους οποίους θα αναφέρεται το foreign key.

Ακολουθούν τα constraints που καλύπτουν τους υπόλοιπους κανόνες:

Ο ερευνητής που αξιολόγησε ένα έργο δεν μπορεί να δουλεύει στον οργανισμό στον οποίο ανήκει το έργο και συνεπώς ούτε να δουλεύει σε αυτό.

```
DELIMITER $
CREATE TRIGGER no_insider_evaluators_ins BEFORE INSERT ON project
FOR EACH ROW
BEGIN
    IF ((SELECT COUNT(*) FROM researcher r
        WHERE new.org_id = r.org_id AND r.researcher_id = new.researcher_id_ev ) > 0) THEN
        SIGNAL SQLSTATE '45000'
        SET MESSAGE_TEXT = 'check constraint on project failed - A researcher cannot evaluate a project for their organization';
    END IF;
END$
DELIMITER ;

DELIMITER $
CREATE TRIGGER no_insider_evaluators_upd BEFORE UPDATE ON project
FOR EACH ROW
BEGIN
    IF ((SELECT COUNT(*) FROM researcher r
        WHERE new.org_id = r.org_id AND r.researcher_id = new.researcher_id_ev ) > 0) THEN
        SIGNAL SQLSTATE '45000'
        SET MESSAGE_TEXT = 'check constraint on project failed - A researcher cannot evaluate a project for their organization';
    END IF;
END$
DELIMITER ;
```

Σε ένα έργο δουλεύουν μόνο ερευνητές του οργανισμού στον οποίο ανήκει το έργο.

```
DELIMITER $
CREATE TRIGGER researchers_work_on_their_orgs_projects BEFORE INSERT ON works_on
FOR EACH ROW
BEGIN
    IF ((SELECT COUNT(*) FROM project p join researcher r
        on p.org_id=r.org_id
        WHERE p.project_id = new.project_id AND r.researcher_id = new.researcher_id) <> 1) THEN
        SIGNAL SQLSTATE '45000'
        SET MESSAGE_TEXT = 'check constraint on_works on failed - A researcher is loyal and cannot work on foreign projects';
    END IF;
END$
DELIMITER ;

DELIMITER $
CREATE TRIGGER researchers_work_on_their_orgs_projects_upd BEFORE UPDATE ON works_on
FOR EACH ROW
BEGIN
    IF ((SELECT COUNT(*) FROM project p join researcher r
        on p.org_id=r.org_id
        WHERE p.project_id = new.project_id AND r.researcher_id = new.researcher_id) <> 1) THEN
        SIGNAL SQLSTATE '45000'
        SET MESSAGE_TEXT = 'check constraint on_works on failed - A researcher is loyal and cannot work on foreign projects';
    END IF;
END$
DELIMITER ;
```

Ένας ερευνητής δεν πρέπει να δουλεύει σε κάποιο έργο για να αλλάξει τον οργανισμό που ανήκει. Επίσης δεν μπορεί να μεταφερθεί σε οργανισμό για τον οποίο έχει αξιολογήσει κάποιο έργο.

```

DELIMITER $
CREATE TRIGGER researcher_transfer BEFORE update on researcher
FOR EACH ROW
BEGIN
    IF (new.org_id <> old.org_id and ( (SELECT COUNT(*) FROM works_on WHERE researcher_id = new.researcher_id) > 0 or
(select count(*) from project where org_id = new.org_id and researcher_id_ev = new.researcher_id) > 0)) THEN
        SIGNAL SQLSTATE '45000'
            SET MESSAGE_TEXT = 'check constraint on researcher failed - A researcher has to drop his projects before he swaps org';
    END IF;
END$
DELIMITER ;

```

Κάθε έργο έχει έναν οργανισμό που το διαχειρίζεται ο οποίος δεν μπορεί να αλλάξει.

```

DELIMITER $
CREATE TRIGGER project_belongs_to_org BEFORE update ON project
FOR EACH ROW
BEGIN
    IF ((SELECT COUNT(*) FROM project WHERE old.org_id <> new.org_id) > 0) THEN
        SIGNAL SQLSTATE '45000'
            SET MESSAGE_TEXT = 'check constraint project on failed - the projects organization is unchangeable';
    END IF;
END$
DELIMITER ;

```

Ο παρακάτω trigger χρησιμοποιείται για να υπολογίσει το derived attribute “duration” σε κάθε project.

```

DELIMITER $
CREATE TRIGGER calc_duration_ins before INSERT ON project
FOR EACH ROW
BEGIN
    set new.duration= DATEDIFF(new.end_date, new.start_date) / 365.25 ;
END$
DELIMITER ;

```

```

DELIMITER $
CREATE TRIGGER calc_duration_upd before update ON project
FOR EACH ROW
BEGIN
    set new.duration= DATEDIFF(new.end_date, new.start_date) / 365.25 ;
END$
DELIMITER ;

```

Όλα τα παραδοτέα πρέπει να υποβληθούν πριν την λήξη του έργου.

```
DELIMITER $
CREATE TRIGGER deliver_on_time before insert ON deliverable
FOR EACH ROW
BEGIN
IF ((SELECT COUNT(*) FROM project WHERE project_id = new.project_id AND
(new.delivery_date < start_date OR new.delivery_date > end_date )) > 0) THEN
    SIGNAL SQLSTATE '45000'
        SET MESSAGE_TEXT = 'check constraint on deliverable failed - This is not Back to the Future';
    END IF;
END$
DELIMITER ;
```

```
DELIMITER $
CREATE TRIGGER deliver_on_time_upd before update ON deliverable
FOR EACH ROW
BEGIN
IF ((SELECT COUNT(*) FROM project WHERE project_id = new.project_id AND
(new.delivery_date < start_date OR new.delivery_date > end_date )) > 0) THEN
    SIGNAL SQLSTATE '45000'
        SET MESSAGE_TEXT = 'check constraint on deliverable failed - This is not Back to the Future';
    END IF;
END$
DELIMITER ;
```

Ο supervisor καθε έργου δουλεύει σε αυτό.

```
DELIMITER $
CREATE TRIGGER add_supervisor_works_on_INSERT AFTER INSERT ON project
FOR EACH ROW
> BEGIN
    INSERT INTO works_on (project_id, researcher_id) VALUES (new.project_id, new.researcher_id_sup);
- END$
DELIMITER ;

DELIMITER $
CREATE TRIGGER add_supervisor_works_on_UPDATE AFTER UPDATE ON project
FOR EACH ROW
> BEGIN
    REPLACE INTO works_on
        SET project_id = new.project_id, researcher_id = new.researcher_id_sup;
- END$
DELIMITER ;
```

Δημιουργούμε επίσης τα δύο views που ζητούνται στο ερώτημα 3.2:

```
DROP VIEW IF EXISTS researchersprojects;  
CREATE VIEW researchersprojects AS  
select r.researcher_id ,r.first_name, r.last_name, p.project_id, p.project_title  
FROM researcher r  
INNER JOIN works_on w  
ON r.researcher_id = w.researcher_id  
INNER JOIN project p  
ON p.project_id = w.project_id  
ORDER BY r.researcher_id;
```

```
DROP VIEW IF EXISTS organizationsresearchers;  
CREATE VIEW organizationsresearchers AS  
SELECT r.researcher_id, r.first_name, r.last_name, r.org_id, org.org_name  
FROM researcher r  
INNER JOIN  
organization org  
ON r.org_id = org.org_id  
ORDER BY r.org_id ASC;
```

Το δεύτερο view εμφανίζει τους researchers (id, ονομα, επίθετο) ανά οργανισμό.

Χρησιμοποιούμε ευρετήρια σε στήλες που χρησιμοποιούνται σε queries συχνά. Μέσω των ευρετηρίων ελαχιστοποιείται ο χρόνος ολοκλήρωσης του query. Η mysql δημιουργεί αυτόματα ευρετήρια στο primary key κάθε σχέσης τα οποία και χρησιμοποιούμε πολύ συχνά. Σε αυτά τα ευρετήρια επιλέγουμε να προσθέσουμε ένα στην στήλη field_name του research_field και ένα στις στήλες start_date και end_date του project που χρησιμοποιούνται για τα αιτήματα του χρήστη.

```
create index idx_field_name on research_field(field_name);  
create index idx_projects_start_date on project(start_date);  
create index idx_projects_end_date on project(end_date);  
create index idx_researcher_org_id on researcher(org_id);  
create index idx_project_org_id on project(org_id);  
create index idx_project_researcher_id_ev on project(researcher_id_ev);
```

Τέλος εισάγουμε αναληθή δεδομένα (dummy data) στην βάση για να μπορούμε να ελέγξουμε τα queries που ζητούνται στο 3ο ερώτημα αλλά και την υλοποίηση του CRUD.

Για την ανάπτυξη και διαχείριση της βάσης χρησιμοποιήσαμε το DBMS client “mysql workbench”.

Για την δημιουργία του UI που θα επιτυγχάνει την υλοποίηση του CRUD και των ερωτημάτων που ζητούνται χρησιμοποιήσαμε php και html. Ο χρήστης μπορεί να επιλέξει και να ακολουθήσει τις οδηγίες που του δίνονται για να πετύχει το εκάστοτε αίτημα.

Η σύνδεση μεταξύ των δύο επιτυγχάνεται μέσω του Apache Server και την διαχειρίζεται η εφαρμογή xampp control panel.

Για την εγκατάσταση και εκτέλεση της εφαρμογής μας απαιτείται εγκατάσταση της εφαρμογής xampp control panel. Περιέχει τις κατάλληλες εκδόσεις php και mysql για την εφαρμογή. Μέσω αυτού ενεργοποιούνται οι υπηρεσίες mysql (port 3306) και apache server (port 80, 443). Επίσης χρειάζεται η λήψη του φακέλου elidekwebapp και τοποθέτησή του στο φάκελο htdocs του xampp.

Τέλος σε κάποιον browser πηγαίνουμε στη διεύθυνση <http://localhost/elidekwebapp>. Ακολουθούν DDL και DML scripts.

```
DROP DATABASE IF EXISTS elidekdb;
CREATE DATABASE elidekdb;
USE elidekdb;
```

```
